

Marc Lawrence King

Full-Stack Developer experienced in modern frontend and backend frameworks, with a strong background in SQL databases and system design. Has hands-on experience deploying applications in both cloud and on-premise environments.

EXPERIENCE

Tambuli Labs, Quezon City — Fullstack Developer

INTERNSHIP | FEB 2026 - JUNE 2026

Designed and developed a dental information system using Django, React, PostgreSQL, and Keycloak, designed to support 10,000+ users. digitizing clinic operations such as patient records, appointments, admissions, and report generation.

Conducted client demos and feedback sessions to ensure the system aligns with real-world dental clinic operations.

Deployed the system in an on-premise environment using Docker containers, enabled secure remote access via SSH over Tailscale, and managed infrastructure through Nutanix virtualization.

C8nnect IT Solutions, Remote — Fullstack Developer

INTERNSHIP | DEC 2025 - MAR 2026

Contributed to building a multi-tenant HRIS using React, Express, Drizzle ORM, and Supabase, eliminating error-prone direct database modifications by implementing a structured ORM-based migration workflow that standardized schema changes and reduced bugs; the system is currently used by 2+ companies.

DOST Central Office, Remote — Programmer / Developer

INTERNSHIP | JUN 2025 - SEP 2025

Developed a full-stack intern management system using Laravel and MySQL, replacing reliance on direct database access with structured CRUD operations across core modules and a real-time, data-driven dashboard for actionable insights, the system is actively used by DOST-SEI to manage intern information and streamline operations.

PROJECTS

Boto Mo 'To — Capstone/Thesis Project

Co-developed an online voting system SaaS using Next.js, Tailwind CSS, Supabase, Prisma, AWS S3, Resend, and Vercel, successfully implemented in a real-world election with 500+ voters, focusing on secure, accessible, and user-friendly voting for organizations.

Simple Mail Merge — Hobby Project

Built a mail-merge web application using React.js, Express.js, Supabase, Resend, Vercel, AWS Lambda, and API Gateway, enabling 10+ students to send personalized OJT application emails efficiently.

SKILLS

Frontend: React.js, Next.js, Livewire

Backend: Express.js, Laravel, Django REST Framework, ASP .NET MVC Webapp

Databases: MySQL, PostgreSQL

Authentication & IAM: Keycloak

Deployment: Docker, Tailscale VPN, Vercel, Supabase, AWS Lambda, AWS API Gateway

Infrastructure: Linux, SSH, Virtualization (Nutanix, VirtualBox)

Version Control: Git

EDUCATION

BS in Information Technology (2022–2026).
Polytechnic University of the Philippines
Main Campus.

Candidate for Magna Cum Laude (Final GWA: 1.26).

Served in leadership roles across multiple student organizations; with exposure to software development, database management, networking, and cybersecurity.

AWARDS

Graduating Magna Cum Laude (Final GWA: 1.26); President's Lister throughout college.

DOST RA 7687 Scholar. Awarded to students pursuing priority STEM degrees in the Philippines.

Java Programming NC III Course Completion. Completed a 30-day course under TESDA.
